

Mybb 开源论坛系统 (Centos 7.2 64 位)

文档更改记录

日期	修改人	版本
2017 年 9 月 23 日	康展云计算	V1.0
2018 年 11 月 26 日	康展云计算	V1.1

常见问题说明:	2
1、获取 FTP 及 mysql 数据库权限.....	2
2、账号密码安全提醒.....	2
3、Mybb 网站安装方法	6
4、软件安装路径.....	11
5、绑定域名.....	12
6、常用命令.....	12

常见问题说明：

操作系统为 centos 7.2 64 位，感谢您支持康展云计算。

1、获取 FTP 及 mysql 数据库权限

远程登录服务器：

下载 linux 端的远程工具 putty

下载后解压并打开 putty.exe，并输入您的服务器 IP 及端口，端口一般默认为 22。

输入 cat default.pass

```
-rw-r--r-- 1 root root 427 Nov 3 11:19 default.pass
[root@VM_132_177_centos ~]# cat default.pass
-----
| YJCOM [ EASY CLOUD EASY WEBSITE ]
-----
| Copyright (c) 2016 http://yjcom.com All rights reserved.
-----

MySQL database name: mybb
MySQL user: root
MySQL password: W43kr[REDACTED]P
FTP account: www
FTP password: IqW1y[REDACTED]
[root@VM_132_177_centos ~]#
```

里面有数据库的 root 权限，自动生成数据库名，FTP 权限。

数据库的管理地址为：<http://您的 ip/phpmyadmin/>

2、账号密码安全提醒

FTP 权限，数据库权限是随机生成的，存放在 default.pass 文件里；建议您修改一个您自己设置的复杂些的密码。

(1) ftp 密码修改：服务器命令行输入 passwd www 后回车（www 为 ftp 用户名）

输入新的 ftp 密码后回车（密码不显示）

```
[root@VM-16-6-centos ~]# passwd www
Changing password for user www.
New password: █
```

需再次输入密码确认后回车（密码不显示）

```
[root@VM-16-6-centos ~]# passwd www
Changing password for user www.
New password:
Retype new password: █
```

密码修改成功：

```
[root@VM-16-6-centos ~]# passwd www
Changing password for user www.
New password:
Retype new password:
passwd: all authentication tokens updated successfully.
```

(2) 关闭 ftp 方法：

在服务器命令行里输入：systemctl stop vsftpd.service

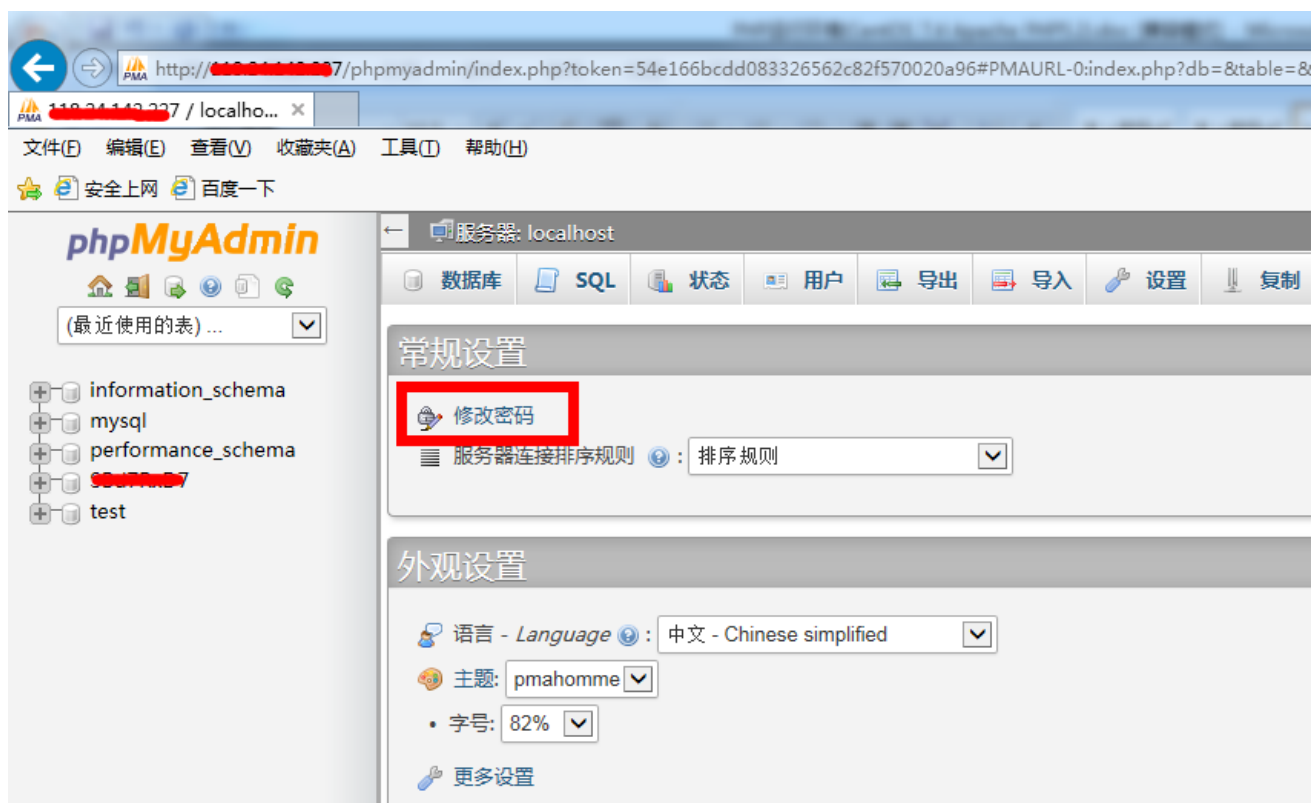

```
[root@VM-16-6-centos ~]# systemctl stop vsftpd.service
[root@VM-16-6-centos ~]# █
```

(3) mysql 修改 root 密码方法：

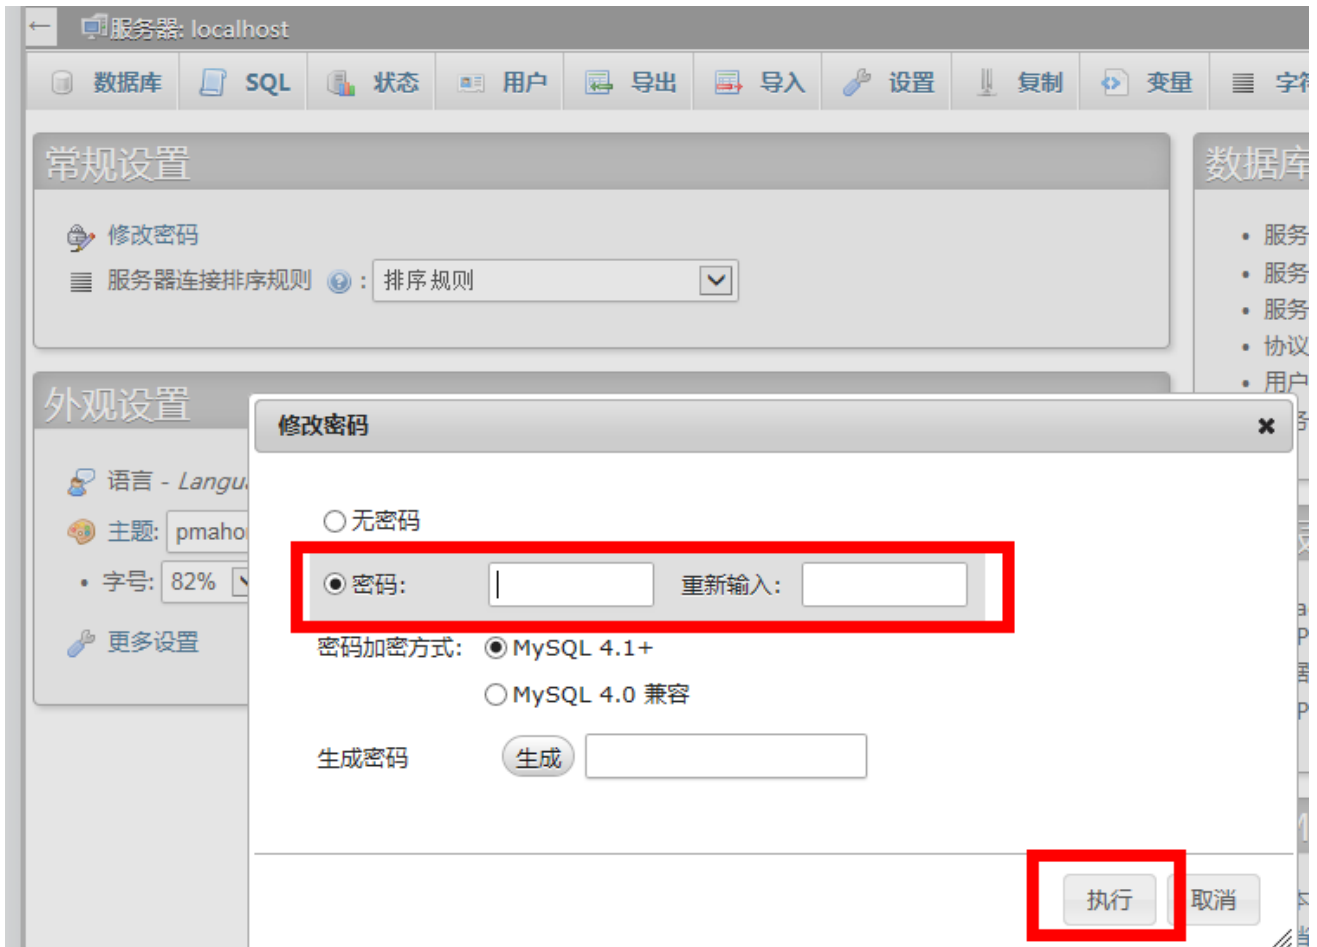

登录数据库管理工具 phpmyadmin，地址为：<http://您的云主机公网 ip/phpmyadmin/>

点击修改密码

2次输入新密码后，点击执行，新密码生效

(4) 关闭 mysql 方法

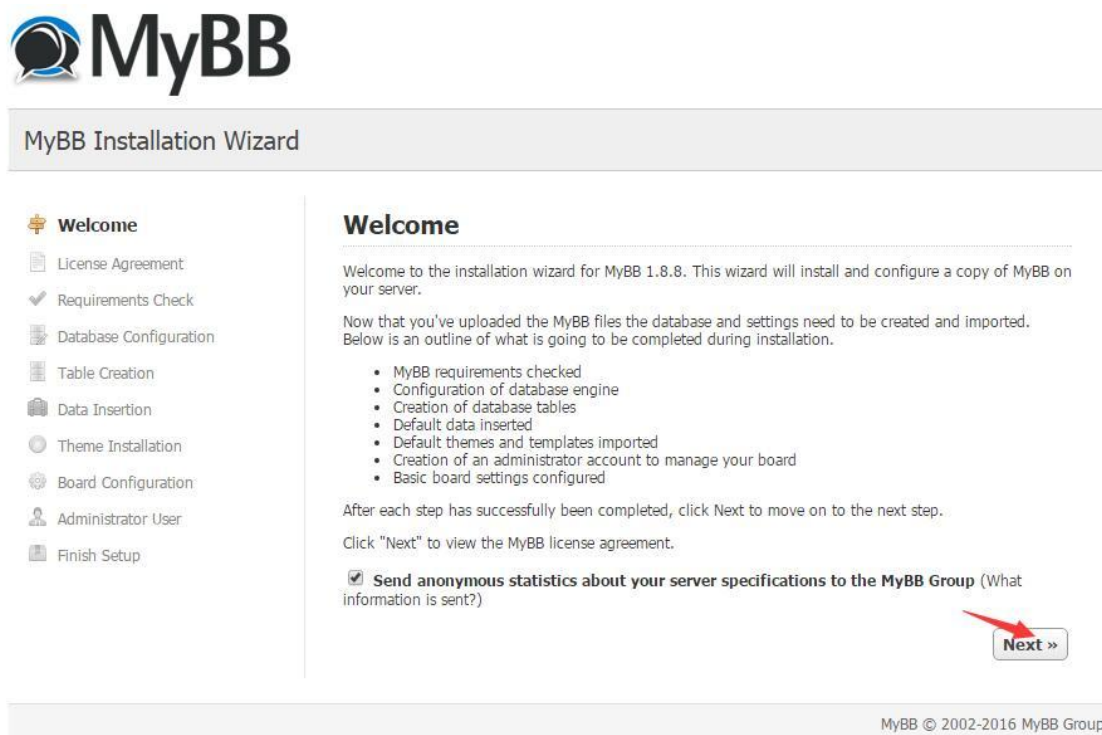

服务器命令行直接输入命令 `systemctl stop mysqld.service` 将关闭 mysql 数据库

```
[root@V[REDACTED]_centos ~]# systemctl stop mysqld.service
[root@V[REDACTED]_centos ~]#
```

3、Mybb 网站安装方法

Mybb 访问安装地址为：<http://您的云主机公网 IP/index.php>（或者用您的域名解析到您的 IP 后，用域名访问安装）。

1) 在浏览器中输入地址,开始安装，如下:

2) 使用协议,如下:

MyBB Installation Wizard

Requirements Check

Before you can install MyBB, we must check that you meet the minimum requirements for installation.

Requirements Check	
Requirements	
PHP Version:	7.0.10
Supported DB Extensions:	MySQL Improved, SQLite 3
Supported Translation Extensions:	Multi-Byte, iconv
PHP XML Extensions:	Installed
Configuration File Writable:	Writable
Settings File Writable:	Writable
Cache Directory Writable:	Writable
File Uploads Directory Writable:	Writable
Avatar Uploads Directory Writable:	Writable

Congratulations, you meet the requirements to run MyBB.

Click Next to continue with the installation process.

7) 配置网站后台登录账号和密码，如下：

-  Welcome
-  License Agreement
-  Requirements Check
-  Database Configuration
-  Table Creation
-  Data Insertion
-  Theme Installation
-  Board Configuration
-  **Administrator User**
-  Finish Setup

Create Administrator Account

Setting up basic board settings...

Inserted 278 settings into 29 groups.

Updating settings with user defined values.

Inserted 13 scheduled tasks.

Inserted 1 admin views.

You need to create an initial administrator account for you to login and manage your copy of MyBB. Please fill in the required fields below to create this account.

Administrator Account Details	
Account Details	
Username:	<input type="text" value="admin"/>
Password:	<input type="password" value="....."/>
Retype Password:	<input type="password" value="....."/>
Contact Details	
Email Address:	<input type="text" value="admin@1234.com"/>

Once you've correctly entered the details above and are ready to proceed, click Next.

8) 安装完毕，如下：

MyBB Installation Wizard

-  Welcome
-  License Agreement
-  Requirements Check
-  Database Configuration
-  Table Creation
-  Data Insertion
-  Theme Installation
-  Board Configuration
-  Administrator User
-  **Finish Setup**

Finish Setup

- Importing user groups...done
- Creating Administrator account...done
- Building Administrator permissions...done
- Building data caches...done

Your copy of MyBB has successfully been installed and configured correctly.

The MyBB Group thanks you for your support in installing our software and we hope to see you around the Community Forums if you need help or wish to become a part of the MyBB community.

Your installer has been locked. To unlock the installer please delete the 'lock' file in this directory.

You may now proceed to your new copy of MyBB or its [Admin Control Panel](#).

Switching from another forum software?

MyBB offers a merge system for easy merging of multiple forums from various different popular forum software, allowing an easy conversion process to MyBB. If you're looking to switch to MyBB, you're heading in the right direction! Check out the [Merge System](#) for more information.

MyBB © 2002-2016 MyBB Group

至此，站点就已经安装完成了。

4、软件安装路径

软件名称	路径地址
默认站点 www 根目录	/yjdata/www/wwwroot
Apache2.4.6	/etc/httpd
Php7.0	/usr/local/php
mysql5.6	/var/lib/mysql
Mybb_1808	/yjdata/www/wwwroot
Vsftpd3.0.2	/etc/vsftpd

5、绑定域名

默认 IP 已经可以访问，您的域名解析到 IP 后即可使用！

如果需要在服务器里做绑定操作，按如下：

打开配置文件 `vim /etc/httpd/conf/httpd.conf` 找到 `ServerName` 选项，

```
# e-mailed. This address appears on some server-generated pages, such
# as error documents.  e.g. admin@your-domain.com
#
ServerAdmin root@localhost
ServerName localhost
#
# ServerName gives the name and port that the server uses to identify itself.
# This can often be determined automatically, but we recommend you specify
# it explicitly to prevent problems during startup.
#
# If this is not set to valid DNS name for your host, server-generated
# redirections will not work.  See also the UseCanonicalName directive.
#
# If your host doesn't have a registered DNS name, enter its IP address here.
# You will have to access it by its address anyway, and this will make
# redirections work in a sensible way.
#
#ServerName www.example.com:80
#
# UseCanonicalName: Determines how Apache constructs self-referencing
# URLs and the SERVER_NAME and SERVER_PORT variables.
# When set "Off", Apache will use the Hostname and Port supplied
```

将 `localhost` 改为 `www.XXX.com` 即可（`www` 后面用您自己的域名代替）

6、常用命令

服务启动，停止，重启操作

mysql: systemctl (start|stop|restart) mysqld.service

vsftpd: systemctl (start|stop|restart) vsftpd.service

httpd: systemctl (start|stop|restart) httpd.service
